Ranal tightens data protection

TIMES NEWS NETWORK

Bangalore: Ranal Engineering Services, a well-known engineering design services company for the automotive, aerospace industries is all set to cash in further from clients in the US and Europe since its Bangalore facility has now been certified with the ISO 27001:2005. This certification is for information security and it lays down strict security processes and measures to ensure that the engineering data is protected.

As it showcases Ranal's ability to design, implement, manage and enforce security processes and controls systematically and consistently throughout the centre, it is bound to attract more clients.

"The certification is a reflection of our commitment to quality and security. We will continue to benchmark and improve our processes for world class global delivery to our customers," Ramesh Chandra, MD-India operations, Ranal, said.

The scope of certification is "Design of Machines and Tooling and Offline Simulation Services for Robot based automation in the Engineering and Automotive Industry". The ISO 27001 is a worldwide-accepted security framework standard that enables a process oriented approach to plan, deploy, control and monitor against information security threats and mitigating business risks. Ranal Engineering Services, is part of the Ranal Group focused on the information technology applications in the engineering domain.
